**School Of Health Sciences And Humanitles  
15th & Race Streets  
Philadelphia, Pa. 19102**

*"Horizons"*

*Horizons . . .  
the edge of a scene  
soft and serene;  
an ending of day,  
a beginning to night;  
a beautiful reflection  
of moments gone in sight  
. . . capture the eye  
reflect days gone by  
as seen in the sky.*

*Many horizons gone  
as days have been long  
And like horizons gone by  
reflected in vast skies  
we too say goodbye.*

*Each of us begins to travel  
a diversified path-  
nursing, med, grad school,  
biomath*

*New friends now treasures of old  
as it is time to start again,  
memories we hold;*

*For each takes a ray of sun  
and a keepsake . . . (of our)  
-HORIZONS-*

*Melissa A. Sfida  
'91*

CARDIOVASCULAR  
PERFUSION

# *Cardiovascular Perfusion*

Cardiovascular Perfusion Technology Program is to provide students with a firm foundation in the medical sciences; this foundation will solidify their clinical training, serve their professional practice and facilitate allied health career transitions. The program is designed to provide students with the opportunities to become competent in the area of perfusion technology. Assist the community in matters relating to the field of perfusion technology by contributing expertise and services as needed.

EMERGENCY MEDICAL  
SERVICES

# *Emergency Medical Service*

Hahnemann's EMS program is a multi-tiered program that meets a variety of needs in the field of emergency medicine. Some of the program objectives are to prepare students entering the program to provide competent clinical prehospital care to those with illness or injury.

Students master skills and concepts essential to the coordination and management of EMS systems and EMS agencies.

To teach students to interact effectively with other health care professionals and patients.

To encourage analysis among students, faculty and community agencies of the important public policy issues confronting both prehospital emergency medical services and the emerging network of EMS systems.

To provide a combination of theoretical and practical experiences and knowledge, thereby affording increased opportunities for career advancement.

To provide an educational foundation to enable successful graduate level endeavors.

HUMANITIES

# Humanities

Health Sciences and Society is a program that offers a curriculum which integrates the natural sciences with the social sciences, and those two disciplines with the humanities and the arts. The curriculum is designed to ensure that the student will be exposed to different career paths within the vast and changing health care industry.

Humanities and Social Sciences are an integral ingredient to each curriculum in the allied health sciences. Through these disciplines the student is made aware of the richness and complexity of the person who will take on the role of client or patient. Literature, philosophy, and religion address questions of the nature of persons. History, psychology, and sociology place the individual in the context of society. Both disciplines are necessary components in offering the student a comprehensive picture of the individuals with whom they will interact as the student assumes his or her professional role in one of the allied health sciences.

Health Education and Related Training (HEART) is a program created for educationally disadvantaged students. It is a decelerated 3-year Associate Degree program. After successfully completing this program, the students may move into a 2-year curriculum for an Associate Degree. HEART introduces students to the health sciences professions. It provides courses in English, math, computers and the sciences. It provides academic assistance throughout the courses and prepares students for further education as health care practitioners.

MEDICAL TECHNOLOGY

# Medical Technology

The Medical Technologist is a professional member of the health care team. With the aid of microscopes and sophisticated instrumentation, the M.T. is able to examine samples of body fluids for purposes of developing data used by the physician in the maintenance of health and the diagnosis and treatment of disease.

The M.T. with a broad background in chemical and biological sciences is educated to work in the five year major areas of the clinical laboratory: Blood Bank, Chemistry, Hematology, Immunology and Microbiology.

Medical Technologists may pursue diverse career opportunities. They are employed in hospital laboratories, physicians' offices, clinics, public health agencies, pharmaceutical firms and research institutions. Choose a career in medical technology and the exploration never ends.

MENTAL HEALTH TECHNOLOGY

# *Mental Health Technology*

The Mental Health Technologist is prepared to perform a diversity of tasks within service delivery in the mental health field. The technologist carries responsibilities in a degree commensurate with his/her middle level professional education, involving direct patient care and contact with the families of patients.

The associate degree program in mental health technology prepares students to meet the demanding need for qualified mental health and human services workers. These workers function as part of a team of other human services professionals (The Psychiatrist, Psychologist, Social Workers, Psychiatric Nurse (ETC) in mental health and human services agencies.

The Bachelor of science program is an upper division program preparing students for mid-level positions in the mental health delivery program. Hahnemann students acquire the knowledge and skills necessary for the effective practice of psychosocial treatment related to community mental health, psychiatric rehabilitation and resocialization.

NURSING

# *Nursing*

The Associate Degree Nursing Program is a two year accelerated program combining liberal arts, science and nursing courses that include rotations. At the end of two successfully completed years, the graduate is prepared to take the State Board of Examination leading to licensing as a registered nurse. The program prepares a skilled patient-side nurse who can function on the health care team in a hospital and in the community. The Hahnemann graduate will have an in-depth grasp of concepts underlying basic health problems. The nursing process is used to plan care for patients at various stages of the life cycle when there are disruptions of health, crisis situations, and alterations in life style.

The Bachelor of Science Nursing program gives RNs who have either an associate degree or a nursing diploma the opportunity to obtain a Bachelor of Science degree. The program is built upon the knowledge base in nursing already acquired by students in their first-step programs. The focus is upon enlarging and deepening the cognitive skills of the nursing process, no repetition of foundational knowledge occurs.

PHYSICIAN  
ASSISTANT  
PROGRAM

# Physician Assistant

Physician assistants are primary health care providers who work under the supervision of a physician as vital members of the health care team.

The concept of the physician assistant is relatively new and has developed from the basic premise that many tasks performed by physicians can be carried out with equal competence by specially trained health professionals. Hahnemann graduates are trained to perform complete or directed history and physical exams, organize the results, evaluate tests, diagnose, or present cases in a problem oriented fashion to the supervising physician. They are also trained to carry out the therapeutic plan and counsel patients about signs and symptoms, the meaning of the diagnosis, the rationale for the effects of treatment, the prognosis, and necessary follow-up.

A physician assistant delivers patient care in a wide variety of practice settings under the supervision of a licensed physician who is responsible and legally liable for the performance of the assistant.

PHYSICAL  
THERAPY  
ASSISTANT

## *Physical Therapy Assistant*

The Physical Therapist Assistant Program is designed to train individuals to perform basic physical therapy procedures in accordance with an established plan of care under the supervision of a physical therapist. The graduate of an accredited physical therapist assistant educational program is eligible to take the examination for state licensure and practice as a PTA. Although several courses in the curriculum can be applied to other academic degrees, the PTAP does not intend to prepare students to enter a physical therapist educational curriculum.

RADIOLOGIC  
TECHNOLOGY

# *Radiologic Technology*

Radiography is the art and science of imaging the tissues, organs, bones and vessels that comprise the human body, by means of radiation.

The radiographer, at the direction of a physician, applies his/her knowledge of anatomy, physiology, positioning and radiographic techniques to accurately demonstrate anatomical structures on a radiograph or other imaging receptor. A thorough understanding of the principles of radiation protection, allows the technologist to produce quality diagnostic images while minimizing radiation exposure to the patient. Radiographers work in a variety of settings, such as hospitals clinics, private offices, industrial and experimental laboratories and commercial sales.
